

JIAJIA XIE

Atlanta, Georgia

☎ [+1-4708382438](tel:+14708382438) ✉ jxie@gatech.edu ➡ [My Web](#)

EDUCATION

Georgia Institute of Technology

Aug 2019 – Dec 2025 (expected)

Ph.D/M.S in Computational Science and Engineering

Atlanta, Georgia

*Ph.D Thesis: **Unveiling Disease Progression:***

Bio-Mechanistic Generative Modeling for Hidden Pathology Dynamics

Presbyterian College

July 2016– May 2019

BS in Economics - 3.95/4.00

Clinton, South Carolina

TECHNICAL SKILLS

Languages: Python, Matlab, R, C++, JavaScript, SQL

Developer Tools: VS Code, Jupyter, Git, Linux, GitHub

Platforms: PyTorch, Tensorflow, Gurobi, Hadoop, Spark, DBeaver, PostgreSQL

Algorithms: Numerical algorithms, Graph theory, Linear/integer/convex/online (full & Bandits) optimization, Linear/nonlinear systems, Random algorithms

Machine Learning: Variational generative models, Score-based diffusion models, Physics-informed machine learning, Text mining, Time-series forecast

Operation Research: Network Modeling/planning/optimization/resilience, Market demand/price forecast

Experience

Amazon

May 2025 – Aug 2025

Applied Scientist Intern, Amazon Extra Large

Bellevue, Washington

Tesla

Sep 2023 – Dec 2023

Data Scientist Intern, Charging Data and Modeling

Palo Alto, California

- Designed and implemented a new matching weekday logic to shift historical energy demand with scaling to forecast daily energy demand over the years. **Accuracy improved by 30% in holiday demand forecasts.**
- Designed and implemented a novel yearly jumps detection algorithm for energy forecast validation. Utilized the Fisher discriminant ratio as the optimization objective of the changepoint detection model. Designed a statistical test to check jump candidates by the p -value and optimize the threshold using the AUC-ROC curve. **The evaluation shows precision improved by 10% while maintaining recall over 80%**
- Tech:** PySpark, SQL, Pandas, Scikit-learn, Numpy, Scipy

Berkeley Lab

May 2023 – Aug 2023

Research Scientist Intern, Building Technology Area

Berkeley, California

- Researched a Meta-learning-based framework for learning representative time series models to describe indoor thermal dynamics of residential buildings using Ecobee data [1].
- Experimented with the framework with various recurrent neural network models. Results show (1) **the cost of training a personalized model from the meta-model is significantly reduced**, (2) **The representative (meta) model can describe the physics of similar residential buildings.**
- Tech:** PyTorch, Scikit-learn

SELECTED PROJECTS

Bio-Mechanistic Generative Models [↗](#) | PyTorch, Gurobi

May 2024 - present

- Source-robust reconstruction of an epidemic (network diffusion process) with online noise [2].
- Network diffusion constrained variational generative models for inferring dynamical brain connectomes under neurodegenerative diseases [3].
- Score-based stochastic network diffusion models for connectomes dynamics under neurodegeneration [4].

Empirical WiFi Networks [5] [↗](#) | NetworkX, PySpark, Mesa, Multiprocessing

2020 - 2021

- Develop, maintain, and optimize data pipeline to process campus's WiFi data to networks
- Develop agent-based simulation for modeling Covid-19 spreading on campus with hyperparameters optimization framework
- Evaluation of various lock-down policies.
