

EDUCATION

Georgia Institute of Technology

Ph.D. / M.S. in Computational Science and Engineering

AUG 2019 – DEC 2025 (EXPECTED)

Atlanta, Georgia

Ph.D. Thesis: **Unveiling Disease Progression: Bio-Mechanistic Generative Modeling for Hidden Pathology Dynamics**

Presbyterian College

B.S. in Economics (GPA: 3.95/4.00)

JULY 2016 – MAY 2019

Clinton, South Carolina

TECHNICAL SKILLS

Languages: Python, Matlab, R, C++, JavaScript, SQL

Developer Tools: VS Code, Jupyter, Git, Linux, GitHub, Brazil

Platforms: PyTorch, Tensorflow, Gurobi, Hadoop, Spark, PostgreSQL, RedShift, AWS (Step Functions, S3, Batch)

Optimization: Numerically iterative methods, Linear/integer/convex/online optimization

Generative Models: Variational Bayesian models, Diffusion Models, Time-series forecasting

Others: Resilient Network modeling, Stochastic Optimal Control

EXPERIENCE

Amazon

Applied Scientist Intern, Amazon Extra Large (AMXL)

MAY 2025 – AUG 2025

Bellevue, WA

- Developed and deployed a neural latent ODE model for station-level delivery forecasts with uncertainty quantification on attainment rates.
- Evaluated the model on all week+1 forecasts datasets, outperforming baseline model by 8 out of 9 parcel types and estimated to save \$7M on operational costs over 6 months for AMXL networks.
- Productionized the pipeline via AWS Step Functions with EC2 Batch, adopted by the Demand Planning Team.
- **Tech:** PyTorch, AWS (Step Functions, S3, Batch), SQL, Docker, Athena

Tesla

Data Scientist Intern, Charging Data and Modeling

SEP 2023 – DEC 2023

Palo Alto, CA

- Built weekday-matching logic for energy demand shift modeling, improving holiday forecast accuracy by 30%.
- Created a changepoint detection method using Fisher ratio and AUC-based thresholding, improving precision by 10%.
- **Tech:** PySpark, SQL, Pandas, Scikit-learn, Numpy, Scipy

Berkeley Lab

Research Scientist Intern, Building Technology Area

MAY 2023 – AUG 2023

Berkeley, CA

- Researched meta-learning for time series modeling of thermal dynamics using Ecobee smart home data [1].
- Experiments showed lower training cost and strong interpretability of physics-based behaviors.
- **Tech:** PyTorch, Scikit-learn

SELECTED PROJECTS

Bio-Mechanistic Generative Models — PyTorch, Gurobi

MAY 2024 – PRESENT

- Robust reconstruction of noisy epidemics with network diffusion [2].
- Variational inference for evolving connectomes under neurodegeneration [3].
- Score-based generative modeling of pathological progression [4].

Empirical WiFi Networks [5] — NetworkX, PySpark, Mesa

2020 – 2021

- Developed data pipeline for campus WiFi mobility data to simulate COVID-19 spread.
- Built agent-based models for policy simulations with hyperparameter tuning.
